

NPTEL MOOC, JAN-FEB 2015
Week 2, Module 5

DESIGN AND ANALYSIS OF ALGORITHMS

Merge Sort

MADHAVAN MUKUND, CHENNAI MATHEMATICAL INSTITUTE
<http://www.cmi.ac.in/~madhavan>

$O(n^2)$ sorting algorithms

- * Selection sort and insertion sort are both $O(n^2)$
- * $O(n^2)$ sorting is infeasible for n over 1000000

A different strategy?

- * Divide array in two equal parts
- * Separately sort left and right half
- * Combine the two sorted halves to get the full array sorted

Combining sorted lists

- * Given two sorted lists A and B, combine into a sorted list C
 - * Compare first element of A and B
 - * Move it into C
 - * Repeat until all elements in A and B are over
- * **Merging** A and B

Merging two sorted lists

Merging two sorted lists

Merge Sort

- * Sort $A[0]$ to $A[n/2-1]$
- * Sort $A[n/2]$ to $A[n-1]$
- * Merge sorted halves into $B[0..n-1]$
- * How do we sort the halves?
 - * Recursively, using the same strategy!

Divide and conquer

- * Break up problem into disjoint parts
- * Solve each part separately
- * Combine the solutions efficiently

Merging sorted lists

Combine two sorted lists A and B into C

- * If A is empty, copy B into C
- * If B is empty, copy A into C
- * Otherwise, compare first element of A and B and move the smaller of the two into C
- * Repeat until all elements in A and B have been moved

Merging

```
function Merge(A,m,B,n,C)
```

```
    // Merge A[0..m-1], B[0..n-1] into C[0..m+n-1]
```

```
    i = 0; j = 0; k = 0;
```

```
    // Current positions in A,B,C respectively
```

```
    while (k < m+n)
```

```
        // Case 0: One of the two lists is empty
```

```
            if (i==m) {j++; k++;}
```

```
            if (j==n) {i++; k++;}
```

```
        // Case 1: Move head of A into C
```

```
            if (A[i] <= B[j]) { C[k] = A[i]; i++; k++;}
```

```
        // Case 2: Move head of B into C
```

```
            if (A[i] > B[j]) { C[k] = B[j]; j++; k++;}
```

Merge Sort

To sort $A[0..n-1]$ into $B[0..n-1]$

- * If n is 1, nothing to be done
- * Otherwise
 - * Sort $A[0..n/2-1]$ into L (left)
 - * Sort $A[n/2..n-1]$ into R (right)
 - * Merge L and R into B

Merge Sort

```
function MergeSort(A, left, right, B)
    // Sort the segment A[left..right-1] into B

    if (right - left == 1) // Base case
        B[0] = A[left]

    if (right - left > 1) // Recursive call

        mid = (left+right)/2

        MergeSort(A, left, mid, L)
        MergeSort(A, mid, right, R)

        Merge(L, mid-left, R, right-mid, B)
```
